

Student Management System

README

A simple Python console-based Student Management System for adding, viewing, and deleting student records.

Features

- Add student details including ID, Name, and DOB.
- View all stored student records.
- Delete a student using their ID.
- Exit the program whenever required.

How It Works

When the program starts, a menu is displayed with four choices. The user selects an option by entering the corresponding number.

- 1 **1. Add:** Enter the student's ID, name, and date of birth. The information is stored in the student list.
- 2 **2. View:** Displays the ID, name, and date of birth of every student currently stored.
- 3 **3. Delete:** Enter a student ID. If the ID exists, that student's record is removed.
- 4 **4. Exit:** Stops the program.

Data Structure

Student records are stored in a Python list. Each student is represented using a dictionary containing the keys: **id**, **name**, and **dob**.

Requirements

- Python 3.x
- No external libraries are required.

Example Menu

1. Add 2. View 3. Delete 4. Exit

Purpose

This project is useful for beginners learning Python lists, dictionaries, loops, conditional statements, user input, and basic CRUD-style operations.
